Books

Transportation Engineering Reference Guide

A compact reference-style document highlighting recommended books, what they are best used for, and how they support transportation engineering teaching, research, and practice.

How to use this guide

This is a curated reference guide for the Showcase page, not a full book. It is designed to demonstrate a clean document viewer experience for the Books category while also being genuinely useful for students and practitioners.

Book / Reference	Best for	Typical use
Khanna & Justo - Highway Engineering	Indian highway fundamentals	Core teaching in pavement, geometric design, and materials
L.R. Kadiyali - Traffic Engineering and Transport Planning	Traffic operations and planning basics	LOS concepts, traffic studies, and planning foundation
IRC Codes and Manuals	Indian design standards	Design checks, audit criteria, and reporting
HCM 6th Edition	Operational performance analysis	Intersection, corridor, and multimodal LOS assessment
AASHTO Green Book	Geometric design logic	Alignment, sight distance, and design consistency review

Suggested reading path

• Start with Khanna & Justo for Indian highway engineering basics and examination-oriented conceptual grounding.

• Use Kadiyali to connect traffic engineering studies with transport planning logic.

• Read relevant IRC codes alongside textbook chapters to bridge theory and standard practice.

• For advanced research or consultancy, use HCM and AASHTO selectively for analytical depth and international comparison.

Recommended pairing by topic

Topic	Recommended starting source
Road safety audit	IRC:SP:88 and field audit reports
Blackspot analysis	Crash data studies + GIS methods references
Pavement evaluation	Khanna & Justo + ASTM/IRC procedure references
Traffic operations	Kadiyali + HCM 6th Edition
Geometric design	IRC standards + AASHTO comparison

Closing note

This reference guide is included to make the Books category functional inside the website viewer. You can later replace it with a real book summary, chapter notes, thesis reading list, or a permitted sample document.
